Remote issue URL:	
Affected version:	
Description:	I just notice when a Single Member belonging to a Group is added and Next the belonging Group is Added all Members of this Group are added if those are Not all ready have been Added *This Ok and expected*

But now if i Delete this Group most of the Members are removed
only the Members which are added manually one at the time are Left Over

I prefer the whole all member of belonging Group are removed
But this LeftOver can be a Feature aswell

Introduce DeleteAll as third button option behind the Group, so we get: Edit Delete DeleteAll ?

*Additonal would be nice to Introduce Third Column "Group" display group name for a user
and display nothing leave empty for a group*

UPDATE
I realize a member only has Edit an no Delete

Introduce Edit and Delete for every User or Group
Delete for user will delete only this user
Delete group will delete all user belonging to this group No users are left over, the idea of third delete all could be an option
but i think the left over functionality as we have now is to confusing delete group means all users in the group and if user delete get supported it's up to
admin to make a more customized selection by add group and afterwards delete any user manually

*Additonal would be nice to Introduce Third Column "Group" display group name for a user
and display nothing leave empty for a group*
