Affected version:			
Description:	<p>Although, the User model defines :login and :mail as unique, it is not guaranteed that these are indeed unique in the database. Parallel requests can insert the exactly same users (apart from the id) if the transaction overlap.</p> <p>Therefore I propose to add a unique-index to the database to ensure uniqueness. Also, I propose to always save the login in lowercase to properly use that index. There still has to be checked if that correctly works with the legacy mixed case logins</p>
