

ChiliProject - Bug # 227: Roadmap displays issue counts for issues that are not visible to the current user

Status:	Open	Priority:	Normal
Author:	Holger Just	Category:	Permissions
Created:	2011-02-26	Assignee:	
Updated:	2011-02-28	Due date:	
Remote issue URL:			
Affected version:			
Description:	If a version is shared and has issues attached that are not visible to the current user, these still are counted into the overall issue counts of the version, visible to everybody.

As per the irc discussion, I prefer this behavior over completely hiding the hidden issues from the progress bar/counts. Perhaps the thing to do (I think deurk suggested it) is to list a new count that is not linkable to the issues page "Hidden issues: 1".

- Subject changed from Roadmap displays issue counts for issues that are not visible to Roadmap displays issue counts for issues that are not visible to the current user

I think it should say:

```
<pre>
* #124 - Restricted issue
</pre>
```

There is no risk in showing the issue number, in fact it might help people ask "what is 124 about?". I'm not sure which phrase is best though:

- * restricted issue - implies restricted by permissions
- * hidden issue - implies that the issue is in the current project
- * private issue - implies the private issue feature

Thoughts?

2011-02-28 06:45 am - Ian Freeman

The verbiage seems trivial, those terms are all interchangeable on this issue for me. What harm is there in revealing that there are private issues present?
