If it works the same as GA (inserting some code portion to pages), you should be able to use the "Redmine analytics plugin":<https://projects.littlestreamsoftware.com/projects/redmine-analytics>.

- Status changed from Open to Declined

I've had a closer look at Piwik, and it seems it works with a javascript solution similar to how Google Analytics works. That should stay in my opinion a plugin, and I think Eric will update it as needed to work with newer ChiliProject versions, so I'm closing this as there already is a solution for it.

Daniel, if you come around using it, it would be nice if you could write up a quick wiki page, thanks :-)

I'm running it on my site so it works with the latest versions. Since it just inserts a chunk of code into the document you can use whatever analytics system you want (including HTML image ones).
