I guess you mean Textile, correct? The inline css support is disabled due to security concerns.

2011-04-15 08:30 pm - Holger Just

Why you try to include here is pure CSS. This is indeed disabled in ChiliProject because it allows anyone to include certain (possibly malformed) CSS and Javascript which can easily lead to a simple to exploit cross site scripting issues.

A workaround we choose at ChiliProject is to include some [[Extra_CSS|special CSS]] classes into our theme which can be used to achieve some formatting effects without having to suffer from the above issues. Another possibility would be my "Wiki CSS plugin":http://dev.holgerjust.de/projects/redmine-wiki-css/wiki to allows trusted users to add additional CSS to wiki pages.

Having said that, I vote _Declined_ on this issue.

2011-04-15 10:36 pm - Holger Just

- Subject changed from support full Textims syntax to Support full textile syntax

2011-05-07 12:49 pm - Muntek Singh

- Status changed from Open to Declined

Declined as the underlying security issue will never change (as per my discussion with several textile people) and several alternative solutions exist.

* Enable the full css on your installation only
* Add the css classes into your theme (as done here)
* Holgers CSS Plugin
