| **Remote issue URL:** | | | |
| **Description:** | Issue is linked to number 339 | | |

the "wiki_syntax_detailed.html" page on an installation says the following :
<quote>
Text formatting

For things such as headlines, bold, tables, lists, Redmine supports Textile syntax. See
http://www.textism.com/tools/textile/ for information on using any of these features. A few samples are
included below, but the engine is capable of much more of that.
</quote>

Better replace Redmine with Chiliproject and place a note that standard installations disable css, making
settings like  h2{color:green}.   non working.
