Description:

In the project overview the current project members are displayed. But the project manager has the ability to assign permissions both per user and per group. If a group contains a lot of users this could be hard to get a good overview of which group got assigned which permissions.

h2. Example:

Lets say that we have Three groups:

+Group A:+
* User 1
* User 2
* User 3

+Group B:+
* User 4
* User 5

+Group C:+
* User 6
* User 7
* User 8

In the project User 3 is the project manager and group A and B and User 6 have developer permissions and group C has report permissions.

In the current project overview this would display the permissions as:
Manager: User 3
Developer: User 1, User 2, User 4, User 5, User 6
Reporter: User 7, User 8

With my suggested option, you could choose to display the information as:
Manager: User 3
Developer: +Group A+, +Group B+, User 6
Reporter: +Group C+

One additional feature would be to expand the group and show its contents by clicking on the group name.
