<b>Description:</b> <p>I need a way, to hide or disable Roles in the users frontend. For example, you have a project and you want a second user who has the ability to manage the project too. So you add this user and normaly you give him him a manager role. But with this role, the person can also create a project, what you dislike. So you create a new role without the ability to create a new project or subproject. But, the manager role still exists and a "bad" person can give a other person the manager role and voila, the person get more rights than you want.</p> <p>So something like a plugin would be usefull for roles, which let you choice, what kind of roles a normal user can give an other person.</p>
