

ChiliProject - Bug # 626: Non-encoded 8-bit data in X-Chiliproject-Site header

Status:	Open	Priority:	Low
Author:	Piotr Romańczuk	Category:	Mail Sending
Created:	2011-09-15	Assignee:	
Updated:	2011-09-15	Due date:	
Remote issue URL:			
Affected version:			
Description:			
My Chiliproject site is named "KuŃnia Konceptu" - with polish diacritics.			
When test e-mail has delivered I've noticed amavis warning in headers:			
<pre>			
X-Chiliproject-Site: KuŃnia Konceptu			
X-Amavis-Alert: BAD HEADER SECTION, Non-encoded 8-bit data (char C5 hex):			
[] X-Chiliproject-Site: Ku\305\272nia Konceptu			
</pre>			
I'm afraid it may lead to non delivered messages in restrictive amavis configurations.
