ChiliProject - Bug # 657: Deleting (Sub)Project not possible

Status:	Closed	**Priority:**	Normal
Author:	Chris Dähn	**Category:**	
Created:	2011-10-13	**Assignee:**	
Updated:	2013-07-02	**Due date:**	

Remote issue URL:	
Affected version:	2.3.0
Description:	I'm using the stable CP version 2.3.0 on Debian Squeeze with ruby 1.8.7 and Apache+mod_passenger.
	When trying to delete a project in the Administrator->Projects page, all "Delete" urls are just simple project urls, missing any params like "/copy" for "Copy Project".
	So clicking on the "Delete" button just opens the project overview page instead of deleting it. Even the workaround to first "archive" the project and then trying to delete it didn't work, either. I couldn't find any errors or warnings in CP logs.
	Maybe the following Redmine issue could be related to this: http://www.redmine.org/issues/8546
	Any hints are appreciated.

- Status changed from Open to Closed

Tested again with ChiliProject 3.6 - all links work again. [SOLVED]

2013-07-02 05:06 pm - Chris Dähn

Update: Bug reproduced with plugin "Project Tree Plugin" enabled.

Deactivating/removing it solved the bug. So it's definitively a problem of the plugin.
