

ChiliProject - Bug # 917: Plugin settings page enforces submit/apply button

Status:	Open	Priority:	Normal
Author:	Luke Carrier	Category:	
Created:	2012-03-02	Assignee:	
Updated:	2012-03-02	Due date:	
Remote issue URL:			
Affected version:			
Description:	The view file file:app/views/settings/plugin.rhtml assumes that all plugins will have a settings form on that particular page, which is not the case for all of them. This should be left down to the plugin to decide, and the form/submit tags that're currently in that file should be removed. This will prevent cases such as the Redmine Checkout plugin, where clicking the apply button nulls all of its values and breaks the project pages.		

Associated revisions
