Affected version:	
Description:	Currently ChilliProject uses the XHTML 1.0 Transitional doctype, it would be nice to move to using the HTML5 doctype as well as making use of some CSS3 features.
	This would likely start off using HTML5 Boilerplate as a base.
	I did start a CSS3 branch on github - https://github.com/EspadaV8/chiliproject/tree/css3 - although I'm likely going to redo a lot of work that's currently in there.
